7

8

9 **7.0 OVERVIEW**

10

11 Tab 7 discusses the Electric Load Forecast and Load Research results.

12

13 Section 7.1 provides a summary of Electric Load Forecast results.

14

15 Section 7.2 provides a summary of the Electric Load Research results.

16

17 Appendix 7.1 is the 2009/10 Electric Load Forecast Report.

18

19

20 **7.1 ELECTRIC LOAD FORECAST SUMMARY**

21

22 The Electric Load Forecast provides a projection of future electricity demand in Manitoba with a forecast provided for both energy and capacity requirements. A copy of the 2009 Electric Load Forecast is provided in Appendix 7.1.

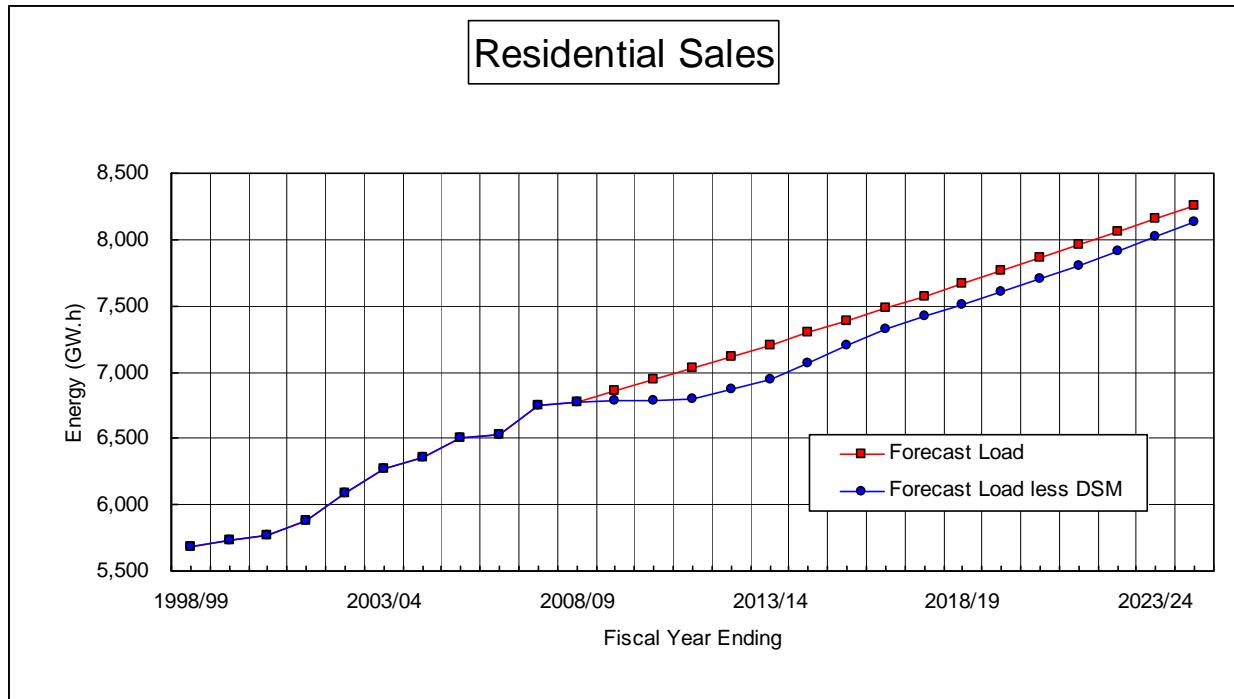

1 **Residential Sector**

2
3 Historical Period (1998/99 - 2008/09):

4
5 Over the past ten years, the electricity demand in the residential sector has grown by an
6 average of 109 GW.h per year on a weather-adjusted basis. The Residential sector has
7 grown due to a number of factors including the addition of more buildings, increased use
8 of electricity for water heating purposes, more computers, and larger televisions being
9 used per dwelling.

10
11 Forecast Period (2009/10 - 2024/25):

12
13 Over the forecast period, the Residential sector is expected to grow by 92 GW.h per year.
14 The lower forecast growth rate is primarily due to anticipated replacement of inefficient
15 appliances. The forecast also anticipates a slight growth in the electric space heating
16 market as well as growth in the electric water heating market. With the inclusion of
17 energy savings achieved through Power Smart programs, the overall net Residential
18 growth is expected to be 85 GW.h per year.

20
21 **Note:** Sales forecast at meter.

1 **General Service Sector**

2

3 Historical Period (1998/99 - 2008/09):

4

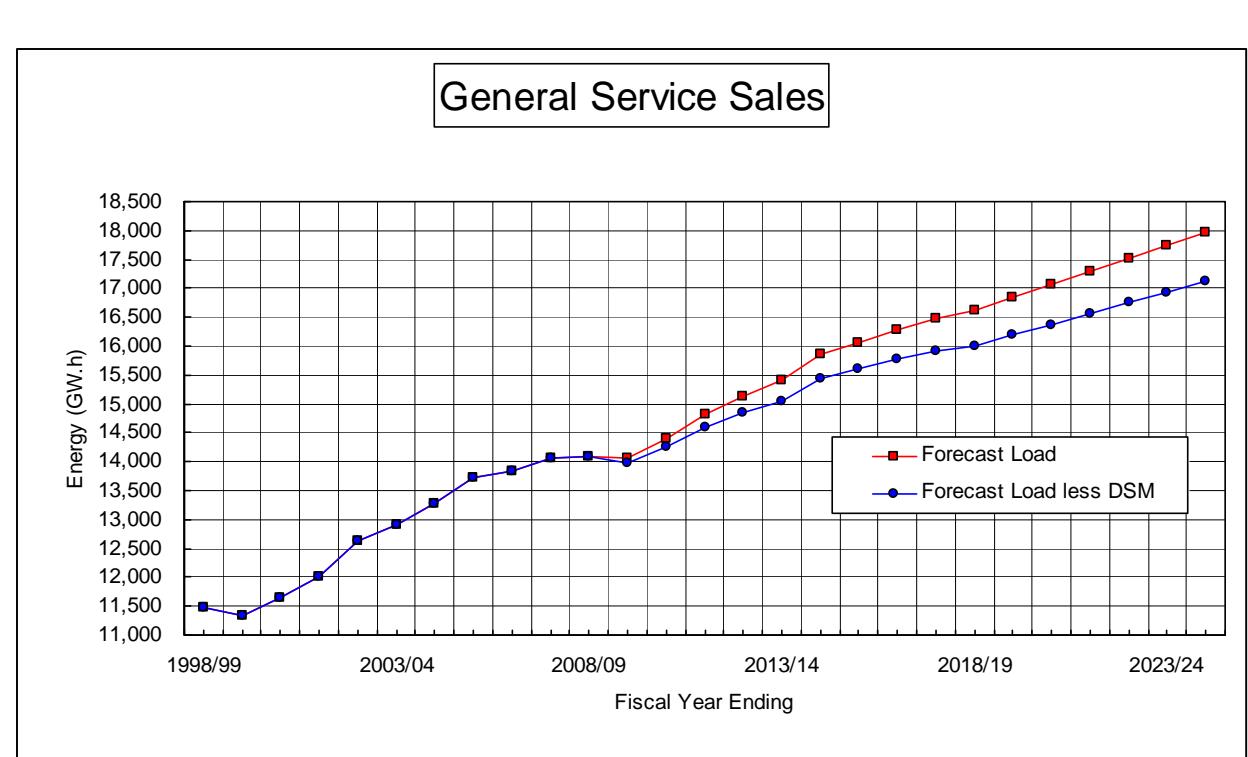

5 During the past ten years, the General Service sector has grown 261 GW.h per year, on a
6 weather-adjusted basis. The growth has been evenly split between Mass Market and Top
7 Consumer categories. Economic performance across the Mass Market has been relatively
8 steady during this period, while most of the growth in the Top Consumer group is due to
9 expansion in the Chemical sector.

10

11 Forecast Period (2009/10 - 2024/25):

12

13 During the forecast period, the General Service sector is expected to grow 242 GW.h per
14 year. This sector is projected to decline in 2009, primarily due to the effects of the
15 economic downturn, then return to normal growth for the remainder of the period. The
16 inclusion of DSM programs will further lower General Service growth to 190 GW.h per
17 year.

19

20 **Note:** Sales forecast at meter.

1 **Net Firm Energy**

2

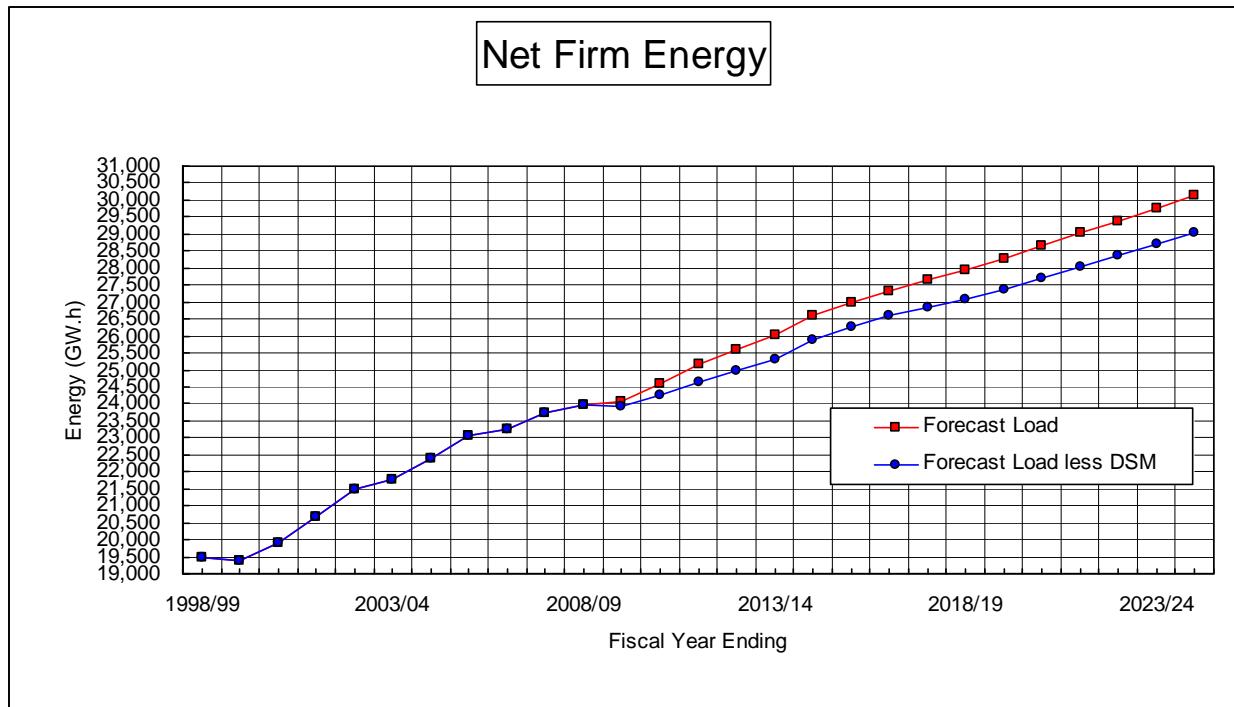

3 Net Firm Energy includes all electricity that is generated to meet firm energy
4 requirements for all customers within Manitoba and excludes non-firm (interruptible
5 load) and station service loads.

7 Historical Period (1998/88 - 2008/09):

9 During the past ten years, Net Firm Energy has grown 451 GW.h per year on a weather-
10 adjusted basis. The trend in Net Firm Energy growth has been relatively consistent over
11 the period. The recession had a significant impact on some General Service Top
12 Consumers in 2008/09 and was the main reason for the lower growth rate in that year.

14 Forecast Period (2009/10 - 2024/25):

16 During the forecast period, net Firm Energy is expected to grow 384 GW.h per year.
17 Lower load growth is projected, primarily due to the impact of the recession on General
18 Service Top Consumers during 2009/10. The inclusion of DSM programs will further
19 lower Net Firm Energy growth to 317 GW.h per year.

Note: Energy forecast at generation.

1 **Net Total Peak**

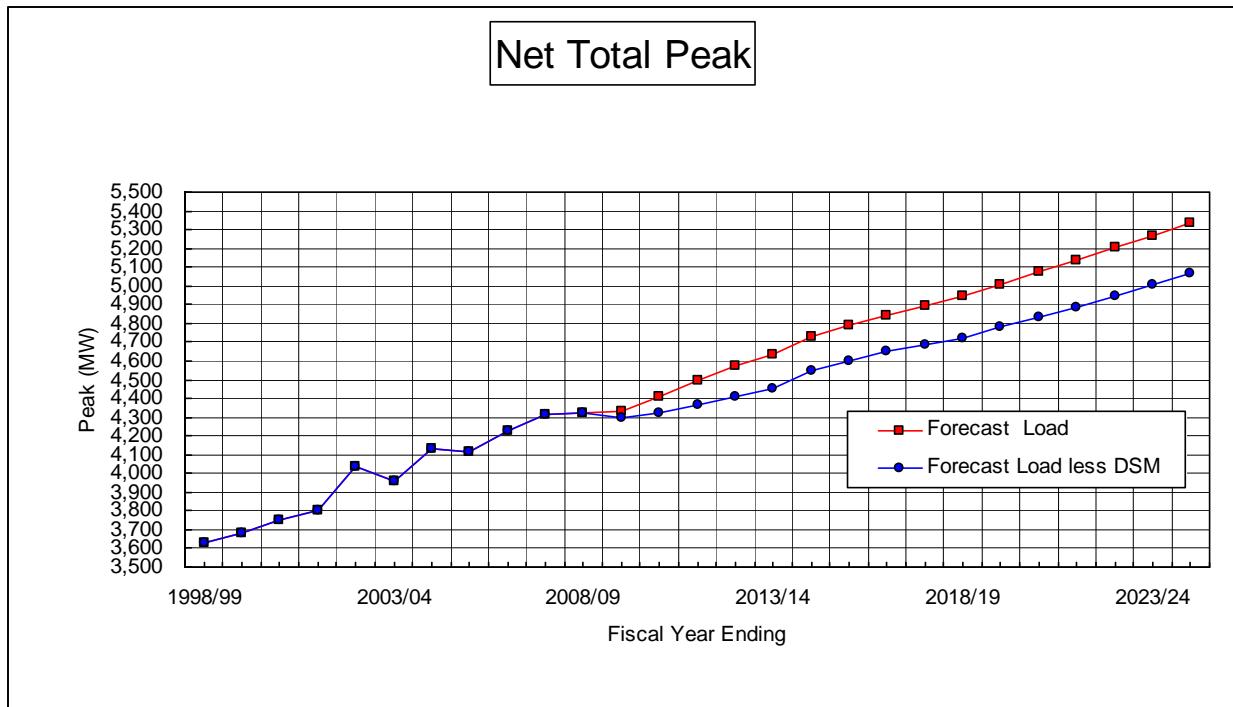

2
3 The Net Total Peak is the maximum integrated hourly load at generation adjusted for
4 losses associated with exports or imports, less station service, but with curtailed loads
5 added back in. The term “integrated” indicates that the average load within the peak hour
6 is used.

7
8 Historical Period (1998/99 - 2008/09):

9
10 During the past ten years, Net Total Peak has grown 69 MW per year, on a weather-
11 adjusted basis. Net Total Peak has grown significantly since 1998/99, reflecting the
12 general growth in energy load over that period.

13
14 Forecast Period (2009/10 - 2024/25):

15
16 During the forecast period, Net Total Peak is projected to grow 63 MW per year. The
17 lower forecasted peak growth is due to slow growth in 2009/10. Growth is expected to
18 return to historical growth rates over the remainder of the period. The inclusion of DSM
19 programs will lower the demand growth to 46 MW per year.

21
22 Note: Peak forecast at generation.

1 **7.2 ELECTRIC LOAD RESEARCH RESULTS**

2
3 This Section presents a summary of results by customer class from the Corporation's load
4 research program. These results are used to develop the customer class energy and peak
5 responsibility tables in the Corporation's Cost of Service Study. The load research
6 results pertain to the fiscal year ending March 31, 2009. The load research results are an
7 integral part of the Cost of Service Study which applies forecast energies to the results to
8 develop energy and demand allocators.

9
10 The Load Research tables provided in this section are as follows:

- 11
12 7.2.1 2008/09 load research summary which shows: number of customers, billed
13 energy, average energy, estimated coincident and non-coincident peaks by
14 class and relative accuracy of peak load estimates.
- 15
16 7.2.2 Highest 50 total peak hours – Winter 2008/09
- 17
18 7.2.3 Highest 50 total peak hours – Summer 2008/09
