## 1 MANITOBA HYDRO 2010/11 & 2011/12 GENERAL RATE APPLICATION 2 3 4 **DEMAND SIDE MANAGEMENT** 5 6 7 9.0 **OVERVIEW** 8 9 Tab 9 discusses Demand Side Management ("DSM"). 10 11 Section 9.1 provides the benefits of DSM. 12 13 Section 9.2 discusses the current DSM plan. 14 15 Section 9.3 is a summary of the progress of Power Smart Programs to date. 16 17 Appendix 9.1 is the 2009 Power Smart Plan. 18 19 Appendix 9.2 provides a copy of the 2007/08 Annual Power Smart Review. 20 21 9.1 **BENEFITS OF DSM** 22 23 Manitoba Hydro's DSM initiative, "Power Smart" consists of energy conservation and 24 load management activities designed to lower the demand for electricity and natural gas 25 in Manitoba. For the electric business, the initiative is one element of the resource 26 options available for meeting the province's electrical needs and the initiative plays an 27 important role in the Corporation's overall integrated resource plan. 28 29 DSM initiatives are designed to assist customers in meeting their energy needs through 30 energy efficient measures. For the electric business, such initiatives enable Manitoba 31 Hydro to serve domestic customers with less energy based on reduced domestic load 32 requirements which allows for reduced capital expenditures and increased energy 33 available for export. Electric DSM initiatives are evaluated utilizing the same underlying 34 criteria and the same economic evaluation approach as used with alternative resource 35 options. 36

Manitoba Hydro's Commercial Lighting Program is one example of an electrical energy efficiency initiative promoting the installation of lighting technologies that use less energy than conventional technologies but provide similar lighting levels. A number of other energy conservation initiatives exist including the New Home Program, the Home Insulation Program, the Compact Fluorescent Lighting Program, the Lower Income Energy Efficiency Program, the Residential Earth Power Loan (Geothermal Heat Pumps), the Home Comfort and Energy Savings Program, the Commercial Refrigeration Program, the Parking Lot Controller Program, the Commercial Building Envelope Program, and the Industrial Performance Optimization Program.

Load management initiatives provide economic benefits to Manitoba Hydro. These initiatives are designed to modify customer demand for energy at a particular time, or shift demand from one period to another, allowing for more lucrative export sales. Manitoba Hydro's Curtailable Rates Program is an example of a load management initiative where participating customers curtail or "turn off" a contracted amount of load at Manitoba Hydro's request for a specified period of time.

## 9.2 CURRENT DSM PLAN

Manitoba Hydro's DSM plan involves a continued commitment to pursuing the maximum cost effective DSM savings achievable. Under Manitoba Hydro's most current long range plan for DSM, "The 2009 Power Smart Plan", (see Appendix 9.1), energy and demand savings resulting from Power Smart initiatives (including savings to date) are targeted to achieve 3,271 GW.h/year and 915 MW by 2024/25. This plan represents a significant investment and commitment by the Corporation.

## 9.3 SUMMARY OF PROGRESS TO DATE

Manitoba Hydro's Power Smart Programs have been and continue to be very successful. Appendix 9.2 provides a copy of the 2007/08 Annual Power Smart Review. The energy savings realized during 2008/09 is currently being evaluated with the report expected to be finalized in late 2009. By the end of 2007/08, Power Smart Programs are estimated to have achieved an annual load reduction of 1,360 GW.h in energy and 488 MW in winter peak demand (at generation). These Power Smart electrical savings translate into a cumulative reduction of \$300 million in customer bills to date and indirect greenhouse gas emission reductions of approximately 918,000 tonnes of carbon dioxide equivalent emission in 2007/08 alone. These domestic energy reductions have contributed to surplus generation capacity, which contributes to energy sold in the export market. The
