MIPUG MFR 13

A detailed overview of the GS Large 30-100 kV class, showing (without names) the list of each customer/meter in this class, their annual and monthly load factors, as well as peak load by month, for each month of 2013/14 and 2014/15.

As noted at pages 195-197 of the transcripts from the Pre-Hearing Conference held on February 12, 2016, the disaggregation of customer load and usage information would result in the disclosure of customer specific information. Given the relatively small number of large energy consuming customers in Manitoba, it is possible to infer the identity of specific customers from the information requested in this MFR.

Manitoba Hydro is prohibited from disclosing customer specific information without the expressed consent of the customer.
