

## Informative Note: Scope

### Installations for Buildings, Structures and Premises

---

Issue Date: October 24, 2022

Based on Manitoba Electrical Code (2018) 13<sup>th</sup> edition

This information is being provided to clarify the electrical installations in or on buildings structures and premises.

*Every effort has been made to ensure the accuracy of the information being provided. However, in the event of a discrepancy between this informative note and the governing Manitoba Electrical Code, The Manitoba Electrical Code shall take precedence.*

*Remember, the Manitoba Electrical Code is constantly being updated. Be sure to familiarize yourself with the latest code requirements before you begin your installation.*

The scope of the Manitoba Electrical Code indicates that this applies to all electrical work and electrical equipment operating or intended to operate at all voltages in electrical installations for buildings, structures, and premises.

This means that we can only apply the Manitoba Electrical Code to each premise, structure or building individually. Each premise is one property.

Therefore you cannot cross property lines or public right of ways with your electrical installation.

**Note 1:** An agricultural customer that owns more than one adjacent property, and the property does not cross any public right of ways, will be treated as one property.

**Note 2:** For irrigation Manitoba Hydro will follow note 1. The contractor must supply Manitoba Hydro's Energy Sales Advisor or the estimator/planner with documentation approving the installation from the applicable Federal and Provincial jurisdiction.
