

Firm price quotation

Manitoba Hydro will provide you with a cost quotation for electric/gas service installation. Once the Electric Service Agreement and/or the Natural Gas Service Agreement are returned to Manitoba Hydro with any required payment(s), an in-service date will then be determined.

Easements

Depending on the circumstances of your application, there may be a requirement for easement(s) on your property as well as neighbouring properties to allow for service(s). Manitoba Hydro will work with the applicant(s) in cases like this.

Brush clearing and grading

Manitoba Hydro is responsible for determining line routes. Once a route to your property has been identified, you are responsible for the clearing of trees, bushes and other brush including the removal of logs, debris and/or snow. Prior to construction of the line route, you must establish a final grade level.

Missing survey monuments

The Municipalities are responsible for the cost of replacing any lost or disturbed outline monuments required by Manitoba Hydro for construction. You are responsible for contacting a Manitoba Land Surveyor to liaise with the Municipality on your behalf to have the necessary monuments restored.

Permits

Before commencing work, contractors or others responsible for carrying out the work shall first obtain a permit from the inspection authority. Manitoba Hydro will not connect any service until the work has passed inspection.

Principal residence

A residential dwelling that has a permanent service and occupied the majority of the year (by owner or tenant).

Seasonal residence

A residence that is not a principal residence and that is used on an intermittent or casual basis.

Distributed generation

You shall install, operate and maintain any generation equipment connecting to the Manitoba Hydro system in a safe and reliable manner and in accordance with Manitoba Hydro's requirements and applicable laws including safety and/or engineering codes.

General notes

- In some instances, before installation of the line can begin, Manitoba Hydro must wait for authorization from public authorities.
- Manitoba Hydro normally supplies overhead lines. Underground lines are available, and requests are dealt with on an individual basis.
- An allowance may be applied toward the cost of three phase service if the following condition exists: a single unit of inductive load 20 hp (kVA) and greater. Otherwise, the allowance is applied toward the cost of single-phase service of equivalent capacity (commercial applications only).
