Re: Manufactured Home Serial #

Location:

Manitoba Hydro has determined that the electrical installation for the above-noted manufactured home is in compliance with Manitoba Electrical Code under permit number _____ and may be energized.

The approval to energize this home does not constitute that the building is approved for occupancy. Manitoba Hydro does not have authority to grant building occupancy. That responsibility belongs to the Local Building official.

Manitoba Hydro will proceed with energizing this home once this letter has been acknowledged and signed, as noted below, and returned to us.

Yours truly,

Serge Vincent
Chief Electrical Inspector

I _____ (Local Building Official) confirm that this building has passed all inspections, has received the necessary permits, or alternatively, a building permit was not required and the installation meets all local by-laws and regulations for occupancy as outlined in the ITS bulletin 25-007 "*Manufactured Homes under the Manitoba Building Code*".
