Re: Manufactured Home Serial # _____

Re: First Nation / Reserve _____

I, _____ representing _____ as their technical expert, confirm that the above-noted manufactured home, being re-purposed/modified and sold to First Nation communities for placement on reserve land, is certified and meets the manufactured home CSA Z240 standard or A277 standard. All modifications including the replacement of furnaces from gas to electric were completed with CSA approved equipment. All electrical upgrades and work previously completed or being undertaken have or will have an electrical permit associated with the work or a building permit for any other modifications. All electrical work has been undertaken/completed by certified and licensed electricians who hold valid Manitoba Electrical licenses. I confirm that none of the completed modifications have impacted the original manufactured home's building certification, life safety systems, CSA Z240 standard or A277 standard.

I confirm that Manitoba Hydro's approval to energize the service and electrical system does not constitute approval of building occupancy. Manitoba Hydro does not have authority to grant building occupancy which responsibility lies with the Chief and Council of the community.

I have authority to bind _____.
