Mobile Home Occupancy Address: _____

Manitoba Hydro has completed the inspection of the electrical installation installed by:
_____ under permit # _____

We have determined that the electrical installation is in compliance with the Manitoba Electrical Code.

Additionally, the approval to energize the service and distribution system does not constitute approval of building occupancy. Manitoba Hydro does not have authority to grant building occupancy, this area of responsibility lies with the local building inspection authority. It is up to the owner of the property to contact the local land authority for information regarding their local building inspection authority to determine what they require for building permits, inspections and for the approval of life safety systems prior to occupancy.

Owners should be aware that future electrical installations will require an electrical permit issued to a licensed electrician and an inspection by Manitoba Hydro.

Manitoba Hydro will proceed with energizing this home once this letter has been acknowledged and signed, as noted below, and returned to us with all other required documentation.

Serge Vincent
Chief Electrical Inspector

I _____ (owner of the property noted above) understand that Manitoba Hydro is not responsible for allowing occupancy and have done my due diligence prior to occupying this home.
