

We want to hear from you.

Manitoba-Minnesota Transmission Project

Manitoba Hydro is proposing to construct a 500-kilovolt alternating current transmission line from Winnipeg to Minnesota to sell surplus power and to enhance the reliability of electricity supply in Manitoba.

You are invited to an open house to gather project information and share your local knowledge in the review of alternative routes and assist in the determination of a border crossing for the project.

Open houses will be held from 4 to 8 p.m. and we will be available to answer questions. Refreshments will be served.

The map outlines the border crossing options under consideration and the area where alternative routes are being presented.
